

CLAIMS

1. A display device comprising:
 a display part; and
 a base part supporting the display part,
5 said base part comprising:
 a tilt unit to mount the display part
 thereon for rotation about a first axis;
 a first member directly or indirectly
 supporting the tilt unit;
10 a second member disposed in a facing
 relationship with the first member;
 a guide part provided on one of the first
 member and the second member for guiding the first member
 and the second member for relative rotation therebetween
15 about a second axis different from the first axis; and
 at least one low friction member disposed
 between the first member and the second member.

2. The display device according to claim 1,
further comprising a cover having an aperture, wherein
20 the tilt unit is fixed to the first member through the
 aperture of the cover, and the first member is disposed
 between the cover and the second member.

3. The display device according to claim 1,
further comprising a cover, wherein the tilt unit is
25 fixed to the cover, the cover being directly or
 indirectly fixed to the first member, the first member
 being disposed between the cover and the second member.

4. The display device according to claim 1,
wherein said at least one low friction member comprises a
30 plurality of low friction members, the plurality of low
 friction members being held on one of the first member
 and the second member and slidable with respect to the
 other of the first member and the second member.

5. The display device according to claim 3,
35 wherein the low friction member comprises one of a ball-
 shaped member and a mushroom-shaped member.
